

MAA VAISHNAVI TOURISM

TODAY'S CHAT – DEVELOPER REQUIREMENT

Central Booking + Train + Ticket + Room + WhatsApp Automation

Website: mavt.in

1. Main Objective

आज की discussion के अनुसार Maa Vaishnavi Tourism के लिए ऐसा centralized system बनाना है जिसमें booking, passenger, group, payment, train ticket, room और future WhatsApp communication एक ही system/database में जुड़े रहें। Developer को नीचे दिए सभी points implement करने हैं।

2. ONE CENTRAL DATABASE – Mandatory

- Website, Android App और Admin Panel एक ही central database/backend/API use करेंगे।
- App से किया गया update Website और Admin Panel में भी दिखना चाहिए।
- Website/Admin से किया गया update App में भी दिखना चाहिए।
- WhatsApp integration इसी central backend से जुड़ेगा; अलग WhatsApp booking database नहीं होगा।
- Future integrations भी इसी central database से connect हों।

3. Booking – Online + Admin Assisted

- Customer Website या Android App से booking कर सके।
- जिस customer को website/app use करना नहीं आता, authorized Admin/Booking Staff Admin Panel में “Create Booking” से उसकी booking बनाए।
- यह अलग offline booking system नहीं है; Admin-created booking भी उसी central online database में रहेगी।
- Cash payment होने पर भी booking offline नहीं मानी जाएगी; केवल Payment Mode = CASH होगा।
- Booking Channel save करें: Customer-Web, Customer-App, Admin-Panel.

4. Group / Booking / Passenger IDs

- Group ID = पूरे family/travel group की पहचान, जैसे GRP-0001.
- Booking ID = हर अलग booking, जैसे MVT-270427-0001.
- Passenger ID = हर individual passenger, जैसे P-000001.
- एक Group में multiple Booking IDs हो सकती हैं।
- बाद में उसी family का नया member आए तो नई Booking ID बने लेकिन existing Group ID से link हो सके।
- Bookings merge न करें; relationship और audit history रखें।

5. Booking Form

- Yatra/Package
- Going/Journey Date और Return Date
- Main Passenger Name
- Mobile Number
- WhatsApp Number
- Email
- Full Address, City, District, State, PIN

- Total Passengers
- Boarding Station और Destination
- Terms/Declaration
- Passenger-wise dynamic fields

हर passenger के लिए: Name, Age, Gender, Travel Type (AC/Non-AC), ID Proof Type और ID Proof Number आदि। Travel Type passenger-level होना चाहिए क्योंकि एक Group में AC और Non-AC दोनों हो सकते हैं।

6. ID Proof Duplicate Check

- ID Proof Number duplicate check करें।
- Same ID मिले तो warning + existing Passenger/Booking/Group details दिखाएँ।
- हर repeat ID को automatic reject नहीं करना है; वही व्यक्ति future में दूसरी yatra/package में आ सकता है।
- Authorized Admin decide करे कि existing passenger को link करना है या नया record बनाना है।
- Override/decision audit log में save हो।

7. Package / Pricing

- Admin-controlled Yatra/Package Master.
- Package name, journey/return dates.
- AC और Non-AC price.
- Adult/Child price यदि applicable हो.
- Additional charges और discount.
- Automatic total calculation.

8. Payment System

- Multiple installments per Booking ID.
- Example: Total ₹40,000 → ₹10,000 + ₹15,000 paid → Paid ₹25,000 → Balance ₹15,000.
- Status: Pending, Partially Paid, Fully Paid, Failed, Refunded.
- Balance = Total – verified paid amount.
- Customer बाद में outstanding balance pay कर सके।
- हर payment का unique Payment ID.
- Amount, date/time, mode, UTR/transaction ID, gateway ID और verification status store करें।
- Payment receipt PDF generate करें।
- Modes: Cash, UPI, Bank Transfer, Payment Gateway, Other.

9. UTR Duplicate Protection

- Payment accept करने से पहले UTR/Transaction ID duplicate check.
- Same UTR को दो बार accept न करें।
- Duplicate मिलने पर original booking/payment reference दिखाएँ।
- Gateway transaction जहाँ possible हो server-side verify करें।
- Webhook idempotency रखें।
- Manual correction केवल authorized user + audit log.

10. Cash Payment

- Cash payment उसी central booking record में save हो।
- Amount, date/time, received by, receipt number, remarks.
- Cash receipt print/PDF.
- Correction/cancellation authorized role से और audit के साथ.

11. Admin Dashboard

- Total Passengers, Bookings, Groups
- Total Amount, Received, Pending
- AC passengers/amount/received/pending
- Non-AC passengers/amount/received/pending
- Online/Admin booking channel counts
- Cash/UPI/Bank/Gateway collection
- Clickable Pending Collection list

Filters: Date, Group, Travel Type, Booking Status, Payment Status, Booking Channel, Payment Mode.

12. Search

- Group ID
- Group Name
- Booking ID
- Passenger ID
- Passenger Name
- Mobile/WhatsApp
- PNR
- UTR
- Room Number
- Train Number
- Booking Channel
- Payment Mode

13. Train Management – Current Process

Current train booking Akbar Travels agent portal से manually की जाती है। Phase 1 में Website/App से direct railway booking mandatory नहीं है।

- System में train/service details manage और export करने की सुविधा हो।
- Going और Return अलग records हों।
- AC और Non-AC अलग रहें।
- Group-wise passenger export हो।
- Actual Akbar Excel/CSV format user के real sample के अनुसार configurable बनाया जाए; columns assume न करें।
- Future में Akbar/Railway API केवल account में required API access/documentation उपलब्ध होने पर जोड़ें।

14. Train Export – Exact Rules

- Separate sheets/exports: Going AC, Going Non-AC, Return AC, Return Non-AC.
- All groups या selected groups export.

- एक Group में multiple Booking IDs हों तो सभी eligible passengers उसी Group के अंतर्गत आएँ।
- Group Name केवल एक बार group heading के रूप में दिखे।
- Passenger rows में Group Name repeat न हो।
- एक Group के बाद exactly ONE blank row; फिर next Group.

Minimum fields: Group ID, Group Name, Booking ID, Passenger ID, Passenger Name, Age, Gender, Mobile, Travel Type, Journey Type, Journey Date, Boarding, Destination, ID details as needed, Train No/Name.

15. Going / Return Train Details

- Journey Type: GOING / RETURN
- Train Number/Name
- Journey Date
- Boarding / Destination
- PNR
- Coach
- Seat/Berth
- Ticket PDF

Customer को My Trip में Going Train और Return Train अलग sections में दिखें।

16. Ticket PDF – Important

- एक PDF में 2, 6 या अधिक passengers हो सकते हैं।
- एक Booking/Group के लिए multiple PDFs हो सकते हैं।
- Example: Going PDF-1 में 6 और PDF-2 में 2 passengers; Return में भी multiple PDFs.
- Original PDF intact store करें; crop/split mandatory नहीं।
- Admin Going/Return select करके PDF upload करे।
- एक PDF multiple Booking IDs/Passenger IDs से map हो सके।
- एक PDF में अलग-अलग bookings के passengers भी हो सकते हैं।
- Possible हो तो PNR/passenger names extract करके matching suggestion दें; Admin final confirmation करे।
- Upload history: filename, date/time, uploader, PNR, journey, mappings, replacement history.

17. Room Management

- Room Master: Hotel/Ashram, Building, Floor, Room Number, Room Type, Capacity, Status.
- Status: Available, Reserved, Occupied, Maintenance.
- Manual allocation + Excel bulk import.
- One booking में multiple rooms possible.
- Same Group की different Booking IDs के passengers same room share कर सकते हैं।
- Room transfer/change history audit के साथ.

Excel allocation minimum: Group ID + Booking ID + Passenger ID + Room Number.

18. Room-Only Guest – Mandatory New Logic

कुछ guests केवल hotel/ashram में room लेते हैं, room rent pay करते हैं और train ticket खुद arrange करते हैं। ऐसे guest के लिए train mandatory नहीं होना चाहिए।

- Yatra, Train और Room को independent service modules रखें।

- Service options: Yatra + Room + Train; Yatra + Room – Train Self Arranged; Only Room; Other Service (future).
- Train Arrangement: Tourism/Office Arranged या Customer Self Arranged.
- Self Arranged Train में PNR/train/ticket fields optional.
- Only Room guest बिना train/PNR/ticket के valid record बना सके।
- Room-only fields: Guest Name, Mobile, ID Proof, Group if applicable, Hotel/Ashram, Check-in, Check-out, Room No, Room Type, Persons, Room Rent, Paid, Balance, Payment Mode.
- बाद में Admin उसी guest record में train/PNR/ticket जोड़ सके।

19. Customer My Booking / My Trip / My Stay

- Initial login: Booking ID + Mobile; future OTP.
- Booking status और group/trip information.
- All passengers.
- Total/Paid/Pending + payment history.
- Balance payment.
- Payment receipt.
- Going/Return train, PNR, coach, seat, ticket PDF.
- Hotel/Ashram, Building, Floor, Room No, Room Type.
- Important instructions.

Only applicable sections show हों। Room-only guest को mandatory train section नहीं दिखना चाहिए। Self-arranged train में train details optional रहें।

20. WhatsApp Automation – Main Requirement

Ticket और Room details update होने के बाद Admin Panel में single-click से customer को WhatsApp पर trip details और applicable ticket PDF भेजना है।

1. Admin Panel → Booking/Passenger/Group खोलें।
2. Going/Return ticket PDF + PNR details map/upload करें।
3. Room number/details update करें।
4. System applicable required information check करें।
5. Button: “ Send Trip Details on WhatsApp”.
6. Predefined/approved WhatsApp template में data automatically भरें।
7. Applicable ticket PDF attachment भेजें।
8. Send/Delivered/Read/Failed status central database में save करें।
9. Resend authorized staff को उपलब्ध हो।

21. WhatsApp Send Conditions

- Tourism-arranged Train + Room: required ticket and room information available होने पर final trip message भेजें।
- Room-only: room confirmed होने पर room details भेजी जा सकती हैं; train जरूरी नहीं।
- Self-arranged train: train ticket/PNR mandatory नहीं।
- Required applicable information missing हो तो incomplete final trip message automatically न भेजें।
- WhatsApp अलग booking database नहीं बनाएगा।

22. Suggested WhatsApp Message

👤 माँ वैष्णवी पर्यटन

प्रिय यात्री जी,
आपकी यात्रा संबंधी जानकारी:

🆔 Booking ID: {{booking_id}}

👥 Group ID: {{group_id}}

👤 Passenger Name: {{passenger_name}}

🚂 GOING TRAIN

Train No./Name: {{going_train}}

Journey Date: {{going_date}}

PNR: {{going_pnr}}

Coach/Seat: {{going_seat}}

Boarding: {{going_boarding}}

Destination: {{going_destination}}

🚂 RETURN TRAIN

Train No./Name: {{return_train}}

Journey Date: {{return_date}}

PNR: {{return_pnr}}

Coach/Seat: {{return_seat}}

🏠 ROOM DETAILS

Hotel/Ashram: {{hotel}}

Building: {{building}}

Floor: {{floor}}

Room No.: {{room_number}}

Room Type: {{room_type}}

📎 आपका Train Ticket PDF इस WhatsApp message के साथ भेजा गया है।

23. WhatsApp Technical Requirements

- Official WhatsApp Business Platform / Cloud API या approved BSP/provider.
- Meta-approved templates जहाँ business-initiated message के लिए required हों।
- Dynamic variables + PDF/media attachment.
- Message ID, recipient, Booking/Group/Passenger reference.
- Status: Queued, Sent, Delivered, Read, Failed.
- Error code/message + controlled retry.
- Idempotency ताकि duplicate webhook/message से duplicate send न हो।
- API credentials server-side secure रहें।

24. WhatsApp Security / Audit

- Only authorized Admin/Booking/Train/Room staff send/resend कर सकें।
- Recipient WhatsApp number booking record से validate हो।

- Ticket mapping और recipient mapping mismatch पर warning/confirmation.
- Every send/resend का audit log: user, date/time, booking, recipient, template, status.
- Ticket PDFs private/signed access में रहें; unrestricted public URL नहीं।

25. Future WhatsApp Extensions

- Booking confirmation
- Payment received / balance due
- Payment receipt PDF
- Train ticket updated notification
- Room allocation/change notification
- Yatra reminder
- Reporting instructions
- Return journey reminder
- Group announcements

26. Security / Backup

- HTTPS.
- Secure password hashing.
- Server-side RBAC.
- Secure payment webhook.
- Private documents.
- File validation.
- Database backups + restore testing.
- Protected audit logs.
- Secure API authentication and rate limiting.
- Customer data isolation.

27. Core Database Entities

- Groups
- Bookings
- Passengers/Guests
- Packages/Yatras
- Payments / Payment Transactions
- Train Journeys
- Train Tickets / Ticket PDFs
- Ticket Passenger Mapping
- Rooms
- Room Allocations
- Users/Roles
- Audit Logs
- Documents
- Notifications (future)

28. Development Phases – Recommended

Phase	Scope
1	Central DB + IDs + Website/App booking + Admin

	Create Booking + Group/Passenger.
2	AC/Non-AC + pricing + installments + UTR + cash receipt + payment verification.
3	Dashboard + pending collection + reports + search + roles.
4	Group-wise train export + Going/Return + AC/Non-AC + configurable Akbar format.
5	Ticket PDF upload + multi-passenger/multi-booking mapping.
6	Room Master + allocation + Excel import + Room-only + Self-arranged Train.
7	Customer My Booking/My Trip/My Stay.
8	WhatsApp Business/Cloud API + single-click ticket/room message + PDF + delivery/audit.
Future	Payment/reminder WhatsApp + Akbar API if available + other integrations.

29. Acceptance Tests

10. Customer 4-passenger booking works.
11. Admin Panel Create Booking creates the same central record.
12. Later member creates new Booking ID linked to existing Group.
13. Mixed AC/Non-AC works correctly.
14. Partial payment correctly calculates paid and balance.
15. Duplicate UTR is blocked.
16. Cash receipt is generated.
17. Going/Return and AC/Non-AC exports are separate.
18. Group export shows Group Name once and exactly one blank row between groups.
19. PDF containing 6 passengers maps correctly.
20. Multiple PDFs and PDFs spanning multiple Booking IDs work.
21. Going and Return can have separate PNRs.
22. Multiple rooms per booking work.
23. Different bookings under same Group can share a room.
24. Room-only guest works without train/PNR/ticket.
25. Self-arranged train guest can use room service without train details.
26. Admin can later add train details.
27. My Trip/My Stay shows only applicable services.
28. Website/App/Admin reflect the same central data.
29. WhatsApp does not send final trip message before required applicable information is ready.
30. Single-click WhatsApp sends correct recipient + correct details + correct ticket PDF.
31. WhatsApp failure is logged and resend works for authorized user.
32. All important actions have audit logs.

30. Final Developer Instructions – Non-Negotiable

- ONE CENTRAL DATABASE / ONE SOURCE OF TRUTH.
- Website + Android App + Admin Panel same backend/API.
- Admin-created booking is centralized online data, not a separate offline system.
- Yatra, Train और Room independent service modules.
- Room-only और Self-arranged Train बिना train details के valid रहें।
- One ticket PDF may contain many passengers and multiple Booking IDs.
- Group, Booking और Passenger relationships सही रखें।
- Going/Return और AC/Non-AC अलग रखें।
- Payment installments + UTR protection + cash receipt mandatory.

- WhatsApp communication central database से आए और single-click ticket + room details भेजे।
- Security, role permissions, private PDFs, backups और audit mandatory.
- Future integrations parallel database न बनाकर same central architecture use करें.

END – Maa Vaishnavi Tourism Today's Chat Developer Requirement
